

**Are YOUR LPO target  
areas on track?**

**What Loss & Near Loss  
Data Can Tell You**

**Safety Topic of the Month  
Richmond Refinery**

**May 2010**

## Background

- We perform Loss Prevention Observations (LPO) to help prevent all types of losses
  - Doing an LPO on tasks with a minimal risk factor is not a good use of anyone's time
  - Our loss and near losses entered in IPS (or by Contractors using Green Cards) show us where things have gone wrong (or could have gone wrong) in the past

## Discussion

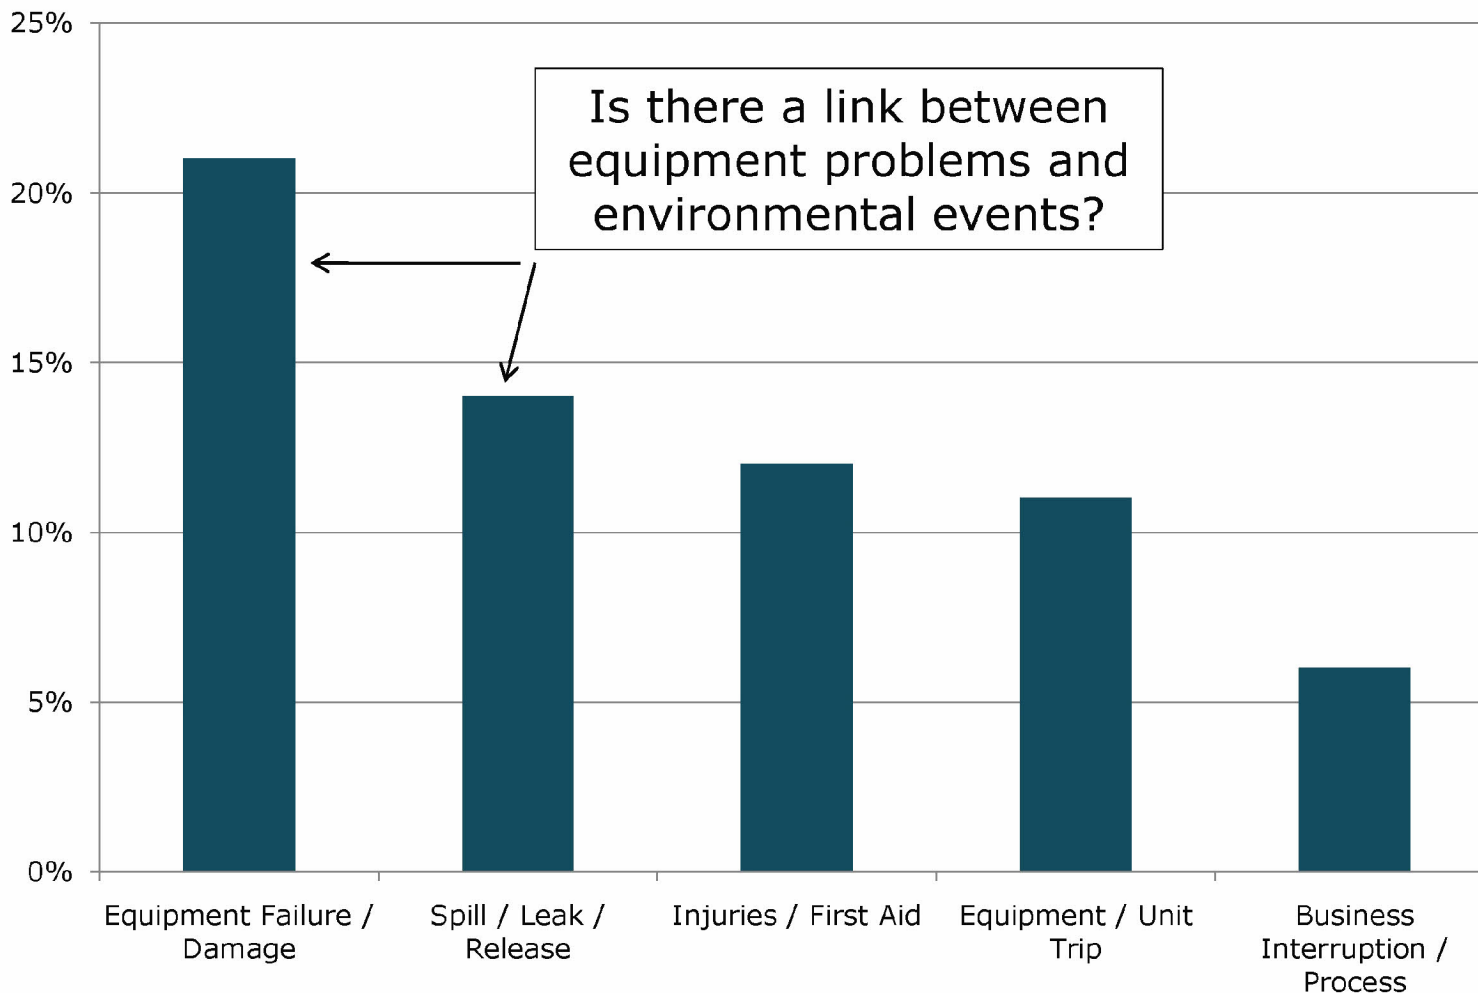

- What are your Work Group's LPO Target Areas?
  - Does the loss / near loss information for your Work Group match your LPO target areas?
    - ▶ Are there other important risks that the loss and near loss information does not cover?
    - ✦ Are all losses / near losses being reported?
  - Use the LI/NLI information on following slides to look at current LPO target areas and make adjustments as necessary
